Hello Sidney,

After review of the website and the materials that you sent us, the Wastewater Operator Certification Program (WWOCP) can accept coursework from your company. Please note that as of January 1, 2017, (with the passage of AB 2890), WWOCP can accept for-profit coursework as long as it is in math, wastewater, biology, chemistry, engineering, or physics. This includes coursework completed before January 1, 2017. Applicants can submit completion certificates to the WWOCP at any time for educational point review. The WWOCP is not able to allot educational points for safety coursework.

You do not have to pay an application fee nor be registered so that coursework can counts toward educational points for the WWOCP.

Please let me know if you have any questions.

Sincerely,

Christa Beck

Subject: On-Line Training Classes

Good Morning Debbie,

I offer a bunch of on-line training classes for water and wastewater professionals that I would like to get approved for operator training unit credits in California. These classes are SCORM compliant and are currently approved in a bunch of other states. The attached spreadsheet shows my existing approvals. I'm also attaching a sample of the information that I typically submit for each course with training unit applications.

What would I need to do to get these classes approved in California? Is there an application fee? Would Indio Water Group need to be registered as a California company?

Thank you for your assistance.

Best,
Sidney
